

Lab2 log

Fanglin Xu

Log

2023.04.17

1. Write a article *How to share files between MacOS and virtual machine?* to make it easier to do lab.
2. Our program should be called like this: `./http-server --ip 127.0.0.1 --port 8888 --threads 8`, which `--ip` presents our Ip address , `--port` is what we bound and the numbers of threads. Notice that, there is `--` before the argument, so long option is needed.
